

Akilandeshwari Srinivasan

In-Class Exercise (CI/CD class)

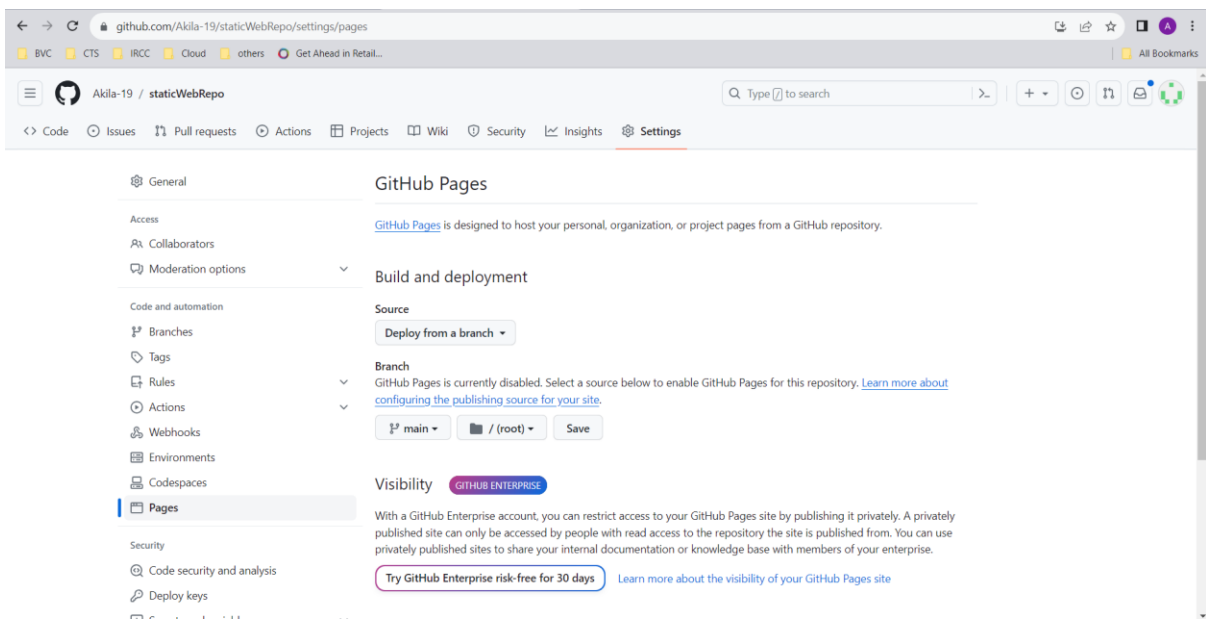

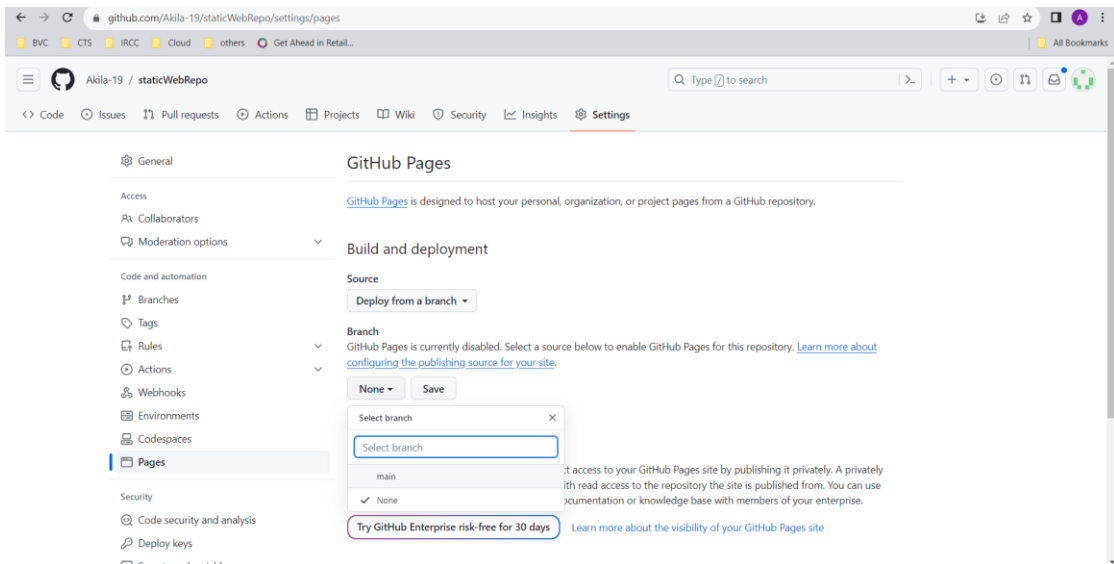

Create a new repository and upload the HTML files.

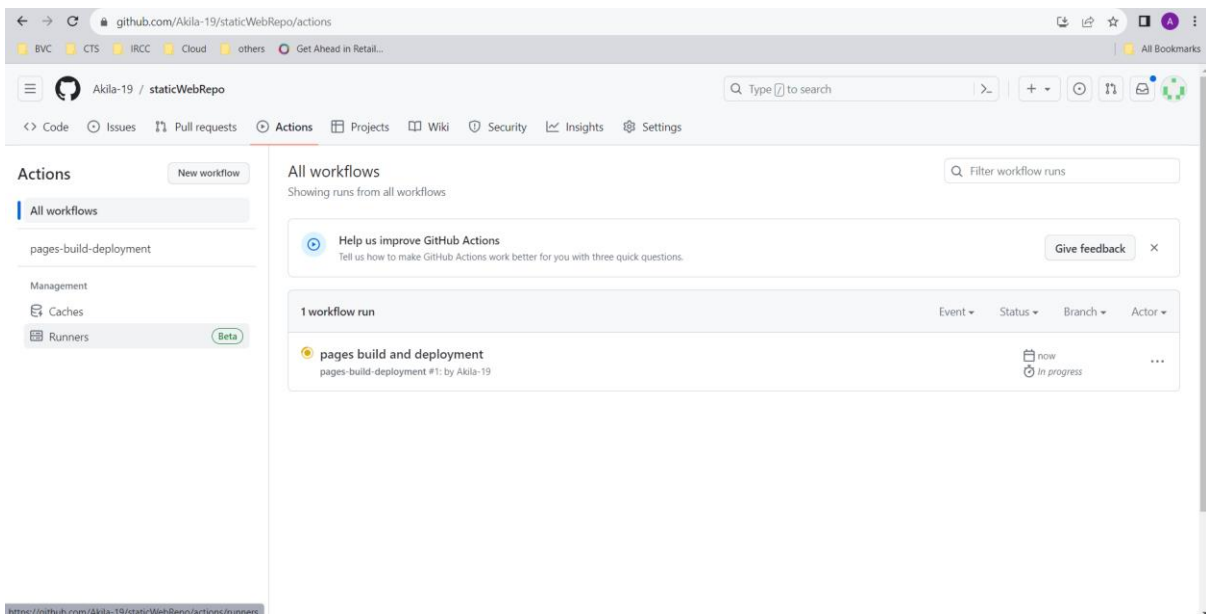

After that go to settings and click on the pages in the side navbar

And in the branch section select the “main” branch and save it

Now we can check the deployment status in the Actions tab.

Once its deployed then we have the deployed gitlink

github.com/Akila-19/staticWebRepo/actions/runs/6803348832

Welcome All!!!!!!

India

Best places in India

Interesting things about India

- Multiculture
- Spicy foods
- Traditional dresses
- Different festivals

Now we have to create a new workflow and under pages

github.com/Akila-19/staticWebRepo/actions/new

Choose a workflow

Build, test, and deploy your code. Make code reviews, branch management, and issue triaging work the way you want. Select a workflow to get started.

Skip this and [set up a workflow yourself](#) →

Search workflows

Suggested for this repository

Jekyll using Docker image

By GitHub Actions

Package a Jekyll site using the jekyll/builder Docker image.

Configure

HTML

Deployment

View all

Deploy Node.js to Azure Web App

Deploy to Amazon ECS

By Amazon Web Services

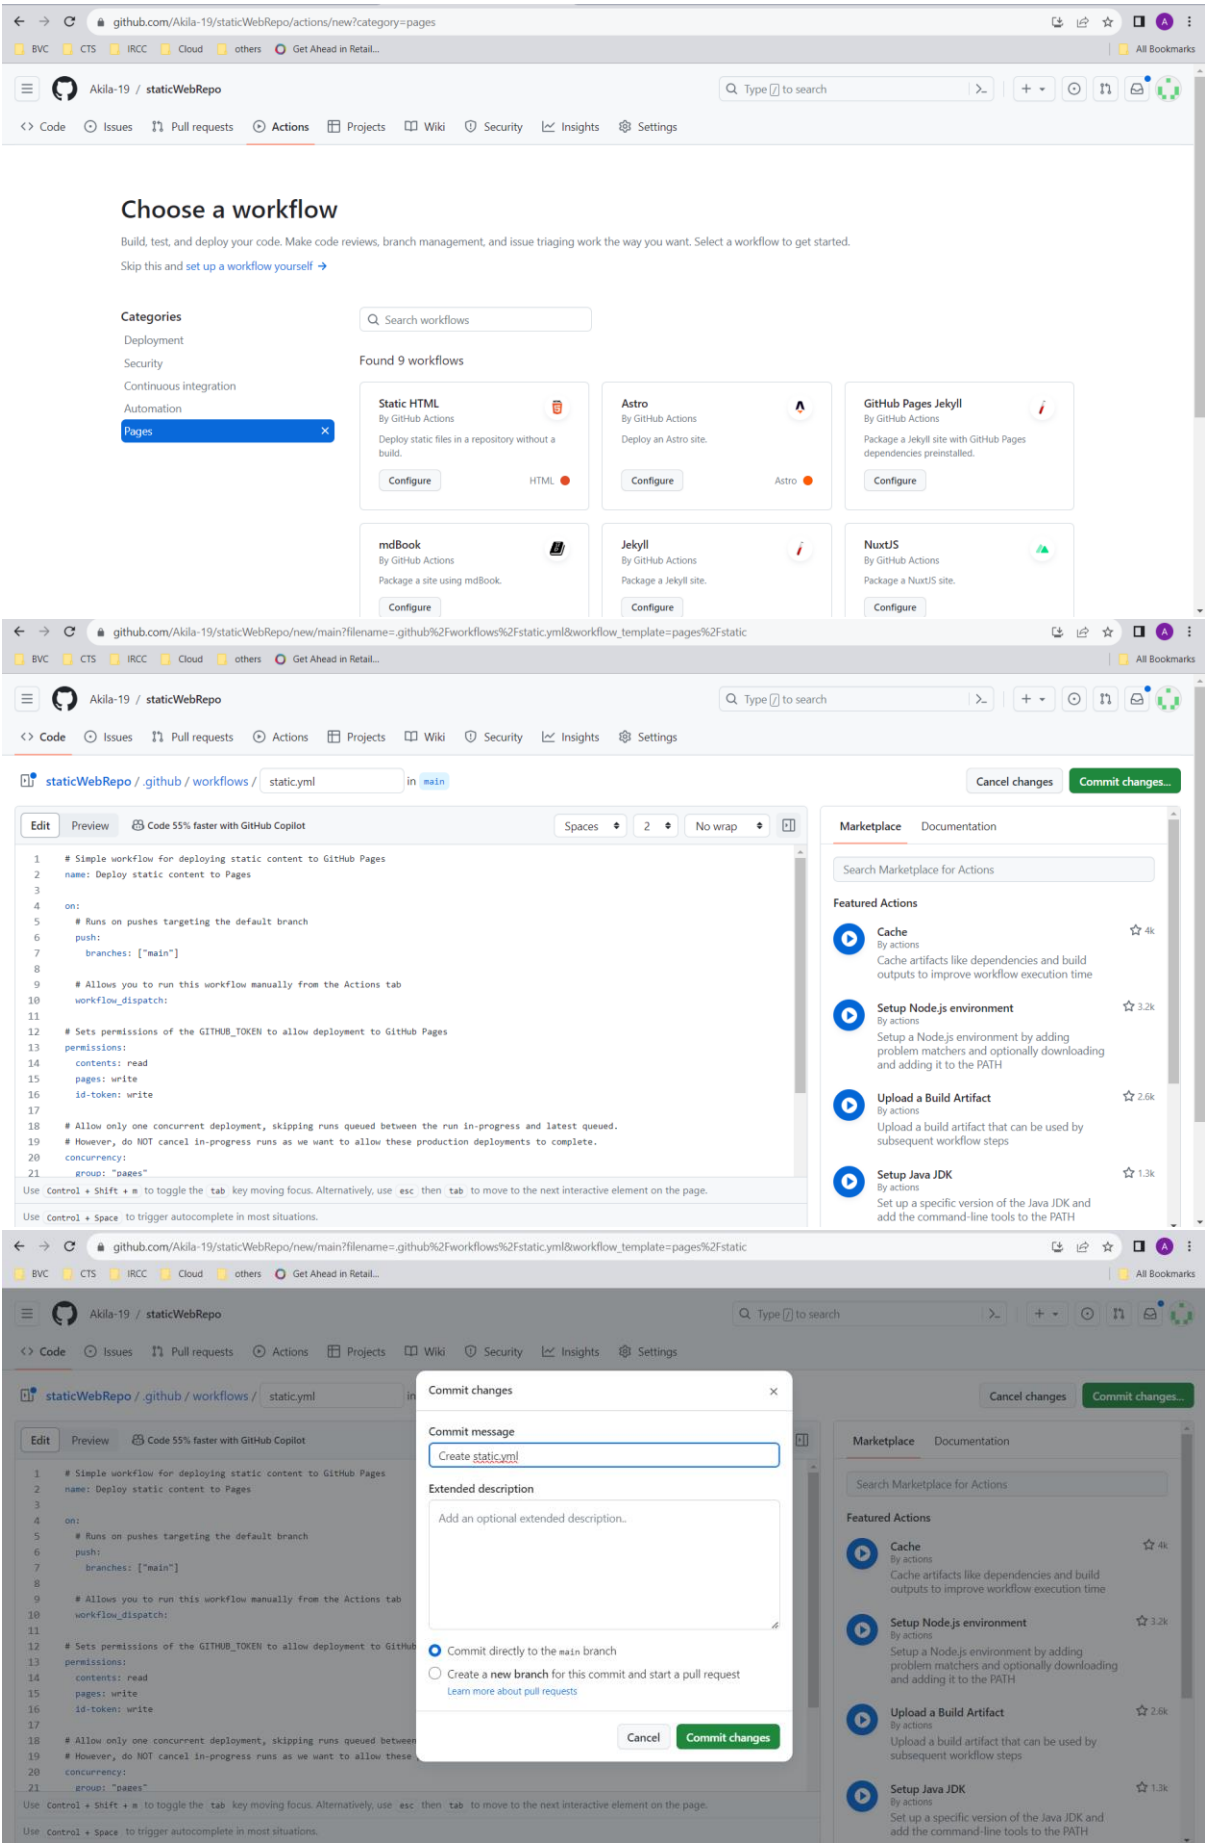

Build and Deploy to GKE

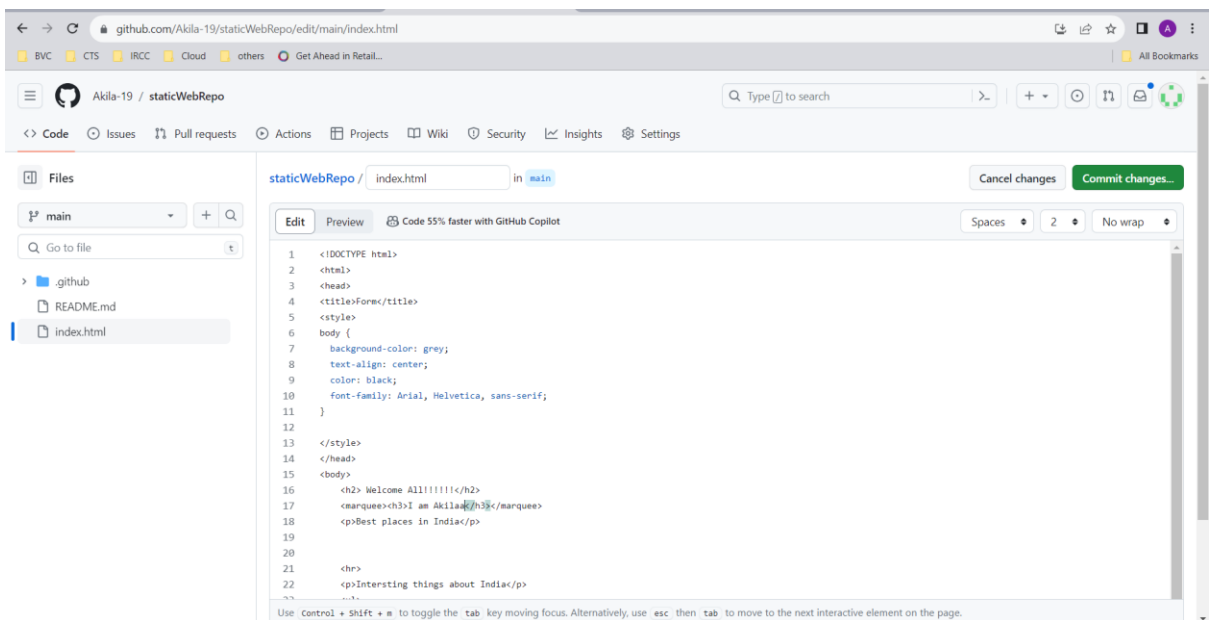

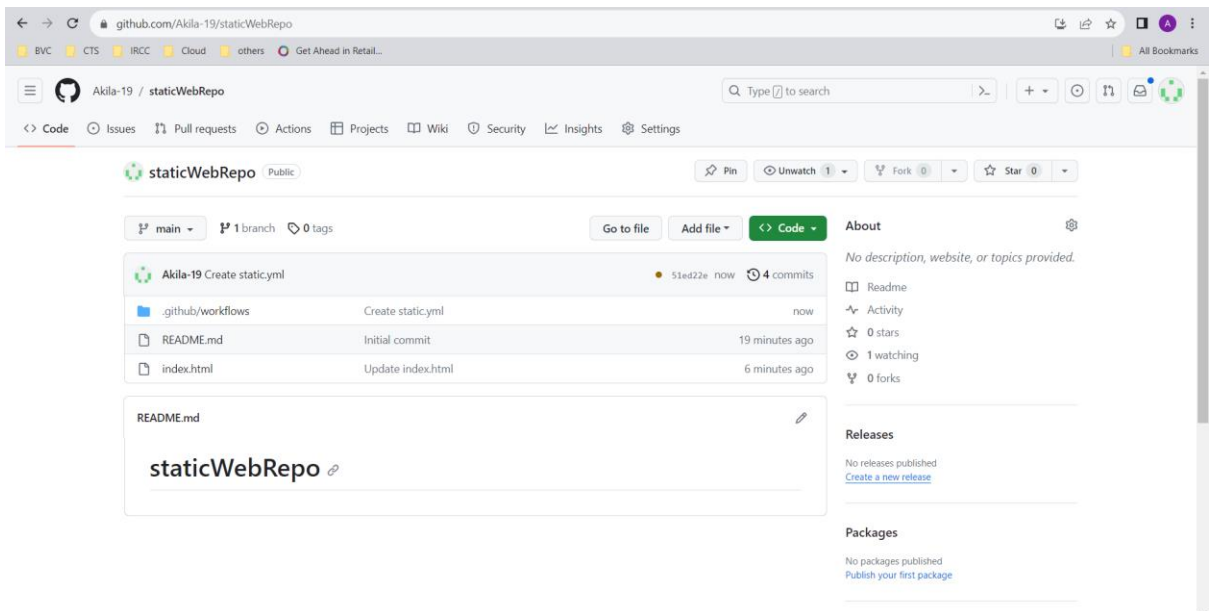

By Google Cloud

Terraform

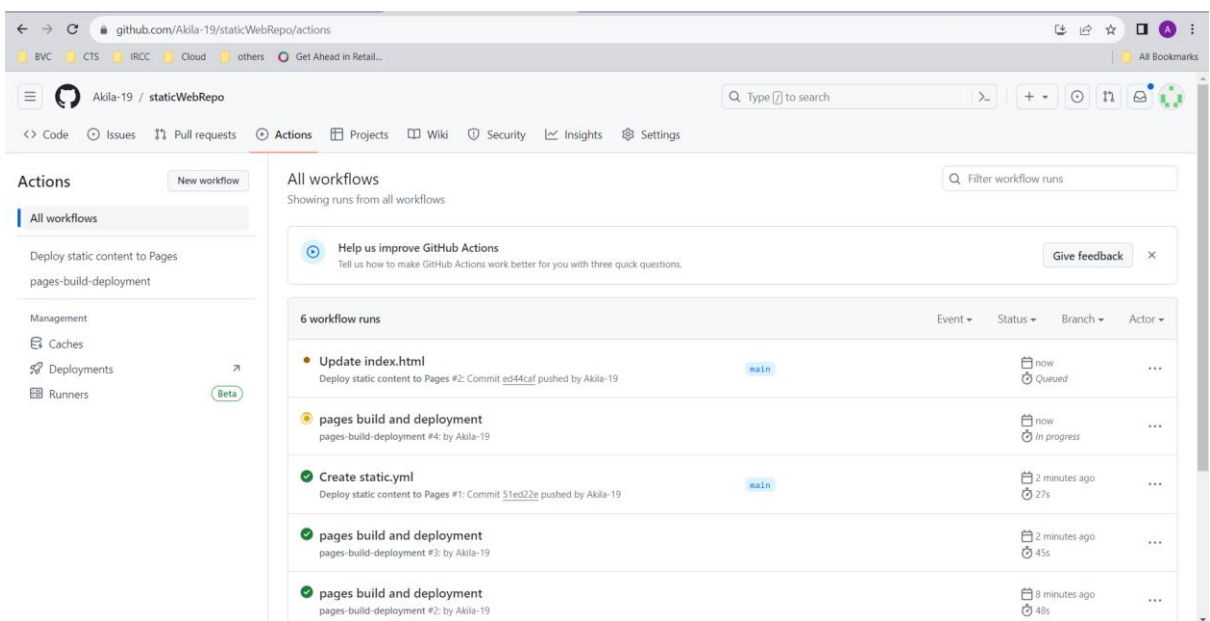

By HashiCorp

Here I have chosen the static HTML options and click on commit changes.

Do some changes in the HTML files and see the automatic changes deployment.
